Uniflex Outlet for Floor-Even Showers

Geberit International Sales AG, Rapperswil, 07 April 2009

The Uniflex outlet for floor-even showers enables the installation of shower areas flush to the floor.

Thanks to the fastening option on the floor and a high level of flexibility and error tolerance, the Uniflex outlet offers maximum ease of installation and safety for the plumber. A sealing flange and sealing collar enable a quick and reliable seal between the floor and building structure and easy, tension-free connection of the next sealing level.

The new trap, shaped for optimised flow, enables a standard drainage capacity of 0.4 l/s in accordance with EN 1253 even at the lowest installation height, while offering a self-cleaning effect.

Six design sets are available for the Uniflex outlet for floor-even showers which have consciously been shaped on the basis of various bathroom designs and thus offer the corresponding solution for all types of bathroom.
